U.S. MILITARY MODULAR EXTENDABLE TENT

16 Different Configurations Support Multiple Mission Requirements

The U.S. Military's Modular Extendable Tent represents the latest design in modern tent technology with an impressive array of features that include metal frame sections that allow for tent expansion and reconfiguration to provide various tent sizes. The Modular Extendable Tent system is based on a free-standing module that is 8 feet long and 20 feet wide which can be connected to provide larger shelters. Tent parts are interchangeable, reducing the type and number of parts needed to assemble, maintain and reconfigure the tents in the field. Since the modular design utilizes metal structural frames, there are no poles to restrict the utility of space - 20 feet spans with NO poles.
